SUMMARY

AI/ML Engineer with ~2 years of experience building LLM-powered systems, agentic workflows, and production AI features. Hands-on with prompt engineering, fine-tuning (QLoRA/PEFT), vector databases, and multi-model evaluation across GPT, Gemini, Llama, and Claude. Track record of reducing hallucinations, cutting costs, and shipping reliably in fast-paced environments.

EXPERIENCE

Memorae - AI/ML Engineer

Jun 2025 – Present

- Architected Memorae's core memory system enabling persistent user context storage and retrieval across AI agents, directly driving personalization and long-term retention.
- Built and deployed a multi-agent AI system (Memory, Reminder, Task, and Support Agents) with Google Workspace integrations through MCP.
- Reduced hallucinations by ~60% and cut token costs by designing prompt architectures and evaluating GPT, Gemini, Claude, and Llama to select optimal models per use case.
- Owned production debugging independently as the primary on-call engineer, resolving live issues across the AI pipeline and ensuring system reliability.

Shoppin' - AI Engineer

Aug 2024 – May 2025

- Built a clothing recognition pipeline using ML models and Instagram APIs to automate outfit discovery from user-submitted images.
- Improved prompt quality and model performance for web scraping and product-matching workflows.

Singapore University of Technology and Design (SUTD) - AI Research Intern

Jan 2024 – Jul 2024

- Developed a CNN-based nutritional value prediction model achieving 95% accuracy using Python and Keras.
- Applied transfer learning on TripoSR for food 3D-printing research applications.

PROJECTS

Fine-Tune LLM Llama2 [↗](#)

- Fine-tuned Meta Llama2 using Parameter-Efficient Fine-Tuning (PEFT) techniques, specifically QLoRA.
- Improved output accuracy and reduced hallucinations through targeted domain adaptation.

AI Interviewer [↗](#)

- Built a voice-based AI interviewer using LLMs and Twilio that automatically calls candidates, asks role-specific questions, and conducts a full interview.
- Implemented dynamic Q&A logic and automated response scoring using Node.js and prompt-driven LLM orchestration.

Pneumonia Detection [↗](#)

- Developed a CNN model for pneumonia detection from X-ray images using Python and Keras.
- Achieved 96% detection accuracy and reduced false positives through Adam optimizer tuning.

TECHNICAL SKILLS

Languages: Python, JavaScript, Node.js

AI/ML: LLMs, Multi-Agent Systems, RAG, Fine-Tuning (QLoRA/PEFT), Prompt Engineering, NLP, Deep Learning, Computer Vision, Vector Databases (FAISS, Pinecone)

Frameworks: LangChain, PyTorch, TensorFlow, Scikit-Learn

Infrastructure: MCP, Docker, AWS, Google Cloud, REST APIs, Git

Competitive: LeetCode 200+ problems, Rating 1559 (Top 29%)

EDUCATION

NIIT University — B.Tech Computer Science (AI), 2020–2024

IIT Ropar — Minor in Artificial Intelligence, 2024–2025
